Cool Seal is a heat-less, solderless terminal, it utilizes revolutionary anaerobic sealant technology that installs in a fraction of the time of comparable heat seal connectors. Simply strip the wire and crimp, activating the sealant, to create an environmentally sealed connection. The innovative new sealant prevents the ingress of moisture and air, the nylon insulation provides maximum abrasion and puncture resistance, while the seamless, 99.9% ETP, copper connector offers optimal electrical conductivity. Requiring no heat, the Cool Seal will reduce overall costs by eliminating the need for torches or heat guns, reducing the installation time, and improving productivity.

Center Hole Roto-molded fenders are manufactured from Marine Grade vinyl for superior strength, cushioning and a high gloss finish. The valve plug housing is molded into the fender and recessed to prevent the valve lug from pulling away. Heavy-duty integral lugs for longer durability. Rotomolded for even wall thickness. Center Hole fenders have a central tube through the center to allow end-to-end line passage and the unique quality ribbed material ensures softness. Fenders can be hung vertically or horizontally with a single line. The ribbed design adds additional strength and abrasion resistance while minimizing rolling.

BEARING SAVER™ & HUB PROTECTOR

Engineered specifically to protect bearings from the elements. Coiled stainless steel spring, combined with a neoprene seal, maintains grease under constant pressure when filled. A built-in outlet allows surplus grease to escape if the hub is over filled or excessive pressure occurs. Extended grease fitting indicates full or that additional grease is needed. The integral flange allows for simple installation and removal. Molded polycarbonate construction provides exceptional impact resistance and eliminates corrosion caused problems.

PYRAMID ANCHORS

Pyramid anchors provide excellent holding power and work in tidal waters and rocky or sandy bottoms. They are superior to concrete blocks because the anchor rapidly sets itself by presenting a digging edge to penetrate the bottom. The pyramid shape presents a large surface area which creates high suction that increases the deeper it sets. The short shank allows mooring in shallower waters without chain wrap-up, a characteristic of mushroom anchors.
