

Belts & Belt pulleys

Belts	426
Belts sorted by original manufacturer, Belts sorted by size	
Belt pulleys	472
Tension pulleys, idler pulleys & drive pulleys, Universal tension & idler pulleys, Timing pulleys	

Belts

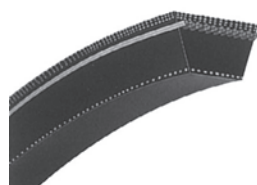

In this chapter you will find two ways of belt – sorting:

Belts sorted by OEM:

Type 1

Wrapped belt. Depending on applications with various rubber compounds and cords (polyester/aramid/kevlar). Reduced belt height and lower cord position for increased flexibility. Very suitable for backside idlers and/or backside tensioners.

Type 2

Raw Edge Multi Ply V-belts. The laminated fabric construction provides a smooth drive with reduced noise emission. Heat resistant, extended belt life.

Type 3

Raw Edge Cogged belts for heavy duty applications with excellent flexibility allowing for smaller pulley diameters, more compact drives.

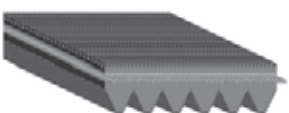

Type 4

Double belts high flexibility for multi pulley drives and reverse power applications. Both the top and the bottom of the belt can be used for power transmission.

Type 5

Banded V- or Powerband, for high power applications with shock or pulsating loads and vibration. Prevents belts to turn over or run off the pulleys and is suitable for vertical shaft drive.

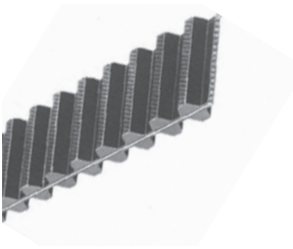

Type 6

Poly V-belts for high speed and high efficiency applications with increased flexibility for compact drives. Excellent for reverse bend applications. Minimizes belt vibration.

**Type 7**

Standard imperial and metric pitch timing belts (both in rubber and polyurethane) for synchronous drives. High transmission efficiency with no slip.

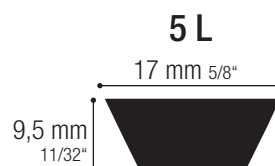

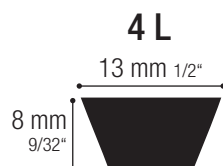

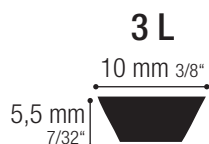

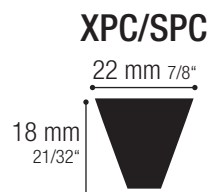

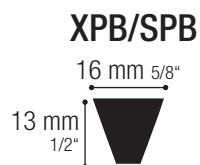

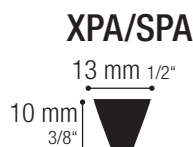

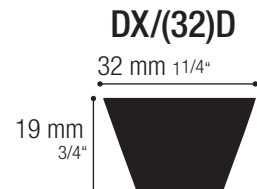

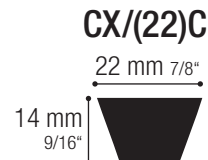

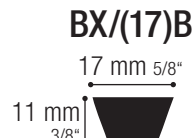

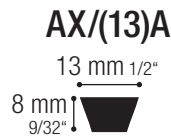

**Type 8**

Double tooth (double sided) timing belts with symmetrical teeth on both sides for multi pulley drives and reverse power applications.

**Type 9**

High power HTD and STD type timing belts with round shaped profiles. High efficiency with increased service life and reduced noise emission. High torque and reduced elongation.

Belts sorted by measurement

Belt measurer

Order no. 6011-X1-0210

Application

- Place the belt on the simulated pulley and pull down on the moveable head until the belt is tight.
- Now read the slotted area on the moveable head to determine which scale to use.
- Check the back edge of the belt as it appears in the gauging slot.
- This will determine whether it is an A, B, 3L, 4L, or 5L belt.
- Match the belt type to the length shown on the vertical rule.
- Now you can see the size of the proven belt.

L3 = 3/8" = 9,5 mm

L4 = 4/8" = 12,7 mm

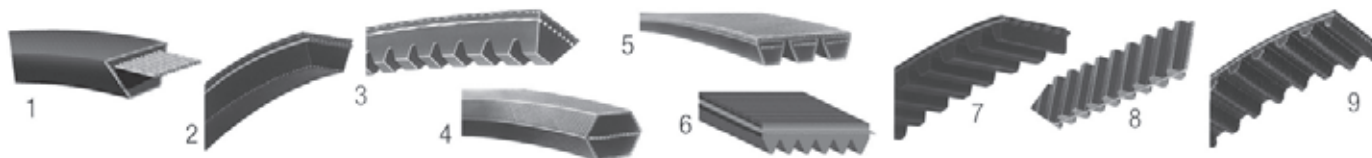

L5 = 5/8" = 15,8 mm

Information for proper storage and usage of belts

Proper storage of belts

Belts should be stored in a cool, dark place away from radiators and out of direct sunlight. Heat will dry out the belts and cause them to become hard and brittle. Storage temperatures should be below 30°C. Under normal conditions belts can be stored as long as six years without damage.

Proper usage of belts

Shifting into forward while unit is still rolling in reverse or rough clutching will cause damage to the belt. Belt guides should be around 2-3 mm away from a tensioned belt, to allow the belt to trap out of the pulley. Oil and grease will cause belt slippage. Oil soaked belts should be replaced immediately. Belt replacement requires proper adjustment referring to the manufacturers workshop manual.

Different kinds of belt wear

Normal wear will show consistent grit along the friction surface of the belt.

Incorrect tension will show the same wear as normal wear but damage will occur after a short period of usage.

Incorrectly positioned belt guides will cause the outside of the belt to drag and cause preterm wear. Frayed or outside worn belts indicates incorrectly mounted belt guards, belt guides or belt clips.

Wrong replacement or adjustment may cause excessive wear to the belt and may cause the belt to break.

Belt pulleys

Tension pulleys, idler pulleys & drive pulleys

Belt pulleys

Timing pulleys

1

2 & 3

Toothed pulleys

#	Replaces original manufacturer number	Application / description	Order No.	Code number
1	100.000.867	toothed pulley drive for engine shaft, 27 teeth, 35V-405, 35V-406	4022-K7-0002	H1029
2	100.000.918	toothed pulley drive for engine shaft, 28 teeth, 15E-405, 15E-406	4022-K7-0003	A0504
3	100.000.919	toothed pulley drive for blade shaft, 28 teeth, 15E-405, 15E-406, 35V-405, 35V-406	4022-K7-0004	J0504
