

EVANS VITAMIN-MINERAL BLEND E

Alpaca and Llama (E 666)

PRODUCT DESCRIPTION

Evans Vitamin-Mineral Blend E complements Evans alpaca and llama bagged feed supplements. Several field studies with this blend indicated that total daily consumption by either alpacas or llamas will average between 0.34 & 0.50 ounces per day. Depending on forage quality and availability, consumption may vary up to almost 1.0 ounce per day (one ounce approximates one level teaspoon). One ounce can satisfy about 20% of the major mineral needs such as calcium, phosphorus, magnesium, etc, 50% of needed selenium and nearly 100% of the suggested vitamin intake. Evans Vitamin-Mineral Blend E is especially useful for animals lower in the social hierarchy and those that have higher mineral cravings. An animal that must compete for its fair share of supplement may satisfy the vitamin/mineral needs with this free choice blend. The additional levels of vitamins and minerals are beneficial to maidens who are still growing, yet gestating, and the gestating-lactating mother. Arthritis and musculoskeletal breakdown in middle-aged animals could have been alleviated or prevented with an increased source of readily available vitamins and minerals. Evans Vitamin-Mineral Blend E contains digestive aids and levels of B-vitamins to minimize the effect of "fescue-fungus" and help lower body temperatures during extreme periods of heat and humidity. B-vitamins at levels thought to aid milk production, as well as promote hair growth and equality in other species, have been added. The levels of the Vitamins A, D, & E, as well as selenium should help satisfy daily requirements without fear of toxicity.

FEATURES AND BENEFITS

FEEDING DIRECTIONS

Use Free Choice And Replenish Every 3-5 Days, Or Top Dress Over A Professionally Manufactured Feed At About 0.5 oz Per Day For An Adult Alpaca. Feed Llamas At 0.15 oz Per 100 Pounds Body Weight. When First Introduced, It Often Takes 7-10 Days For The Animal To Enjoy The Taste. Consumption Will Vary With Animal's Use, Weather Conditions, And Quality Of Available Forage And Feed.

FOLLOW LABEL DIRECTIONS. THE ADDITION TO FEEDS OF HIGHER LEVELS OF THIS PREMIX CONTAINING SELENIUM IS NOT PERMITTED. FEEDING ADDED SELENIUM AT LEVELS IN
