for your vacuum brand.

BAGS

QUALITY
FILTRATION

Filtrete™ vacuum bags help capture household dust.

MICRO
ALLERGEN
FILTRATION

From the air your vacuum pulls through the bag, Filtrete™ Micro Allergen vacuum bags capture 94% of particles larger than 1 micron in size, including dust mite debris, grass and ragweed pollen. They also capture 57% of particles between 0.3 and 1 micron in size, including household fibers and other microscopic allergens.

SYNTHETIC
HEPA
FILTRATION

Filtrete™ Synthetic HEPA vacuum bags are designed according to strict HEPA standards. From the air your vacuum pulls through the bag, the media in these bags help trap 99.97% of all airborne pollutants 0.3 microns or larger, including mold spores, pet dander, grass and ragweed pollen, and other microscopic allergens.

FILTERS

QUALITY
FILTRATION

Filtrete™ vacuum filters help capture dust mites, grass and ragweed pollen.

HEPA
FILTRATION

Filtrete™ HEPA vacuum filters are designed according to strict HEPA standards. The media in these filters help trap 99.97% of all airborne pollutants 0.3 microns or larger, including mold spores, pet dander, grass and ragweed pollen, and other microscopic allergens.

OPTIMUM
PERFORMANCE

Replace your vacuum belt every 12 months for optimum performance.

Filtrete™

3M

SYNTHETIC HEPA

99.97%
0.3+ Microns

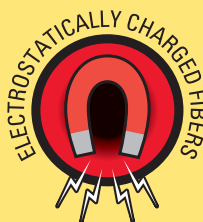

Household Dust

Pollen and
Dust Mite Debris

Mold Spores
and Pet Dander

Filtrete™ filtration media contains electrostatically charged fibers that work like magnets to help attract and capture particles. The electrostatic charge is most effective when your vacuum bag is new and clean. As particles build up, they begin to cover up the charged fibers, reducing their effectiveness. The time frame and extent of the reduction will depend upon your actual conditions of use.

MICRO ALLERGEN

94%
1+ Microns
