SPREADER SETTINGS (One pass application)

The following settings are approximate for applying contents of this package at a suggested rate of 3 pounds per 1,000 square feet. Settings are based on an average walking speed. Reduce setting for slower speed; raise setting for higher speed. Check your spreader on 250 square feet and adjust to apply at the rate of 75 pounds per 250 square feet. Sweep (do not wash) all fertilizer materials from surfaces immediately after application, because certain fertilizer ingredients can cause permanent stains. Wash out spreader after each use and allow it to dry thoroughly. Treat any exposed metal spreader areas with oil to reduce corrosion.

USAGE TIPS

For rectangular lawns: Apply two header strips across each end for a turning area. Then apply back and forth in the longest direction.

For irregular-shaped lawns: Apply a header strip around the entire lawn for a turning area, then apply back and forth.

Note: Each pass should be within 5 feet of each other to ensure an overlap.

- Do not leave spreader open when making turns.
- For best results, do not apply on a windy day.
- Swath will vary due to weather conditions, product used and walking speed.
- To determine how much coverage you need, multiply the length of your lawn by its width. This equals your total square footage. Deduct any non-lawn areas (house, gardens, walkways, etc.). One bag treats up to 15,000 sq. ft.

If your spreader is not listed here, or if you bought a Jonathan Green spreader prior to 2017, please visit www.jonathangreen.com for the correct setting.
