

Did You Know?

Just Add Water

Use **cold** water to **firm** up your scrubber when the cleaning gets tough (burnt/sticky messes). For added power, immerse in ice water or dampen and store in the fridge. **Warm** water creates a **soft** and compressible scrubber, perfect for accessing tight areas or producing a soapy lather.

Keep it Clean

For best results, rinse thoroughly and let air dry after use. To release stubborn debris, massage under warm running water. Scrub Daddy products are microwave safe for up to 1 minute.

Use Less Chemicals

Try using our products with just water before reaching for the soap. They do an amazing job on their own! For messes that require a detergent, we recommend using a mild dish soap, baking soda, or vinegar. Avoid harsh chemicals for maximum service life.

Life Span

The unique foam used in Scrub Daddy products will deteriorate over time. The rate at which this occurs will vary depending on individual use. A torn or crumbly Scrub Daddy may still help in your basement or garage.

Scratch Free

We have independently lab tested our products on over a dozen household surfaces so you don't have to! View the full list on scrubdaddy.com/faqs/. Still have concerns? Test a small and inconspicuous area first.

Absorption

Scrub Daddy's FlexTexture[®] material absorbs less water than a common sponge.

Color-Coded Cleaning

Multiple colors help reduce the chance of accidental cross-contamination.
